

ARCHIEROSE

Archie Rose

Application of best practices to Google Workspace, security review and end user support. Daily ongoing care and maintenance, onboarding and offboarding of users with a training and education program for the team.

The challenge

As many startups do, we saved money by managing things ourselves. Experiencing growth meant we had to focus on what we are good at and find partners to assist in key areas for business support. We were struggling with processes around Google Workspace were not getting the best out of the product.

The solution

Onboarding Archie Rose involved an in-depth analysis of their working process and existing data with the account. We applied best practices to the sharing settings to ensure valuable IP is protected. We now provide proactive data backup and sharing reviews, daily assistance with on/offboarding and training for all staff to get them productive quickly.

The results

The SixFive team helped with in-depth training sessions, monthly one on ones to clean up the system, ensuring our data is safe and streamline processes to enhance productivity in the business. All staff can access online training sessions at anytime or reach out to SixFive for support. Great service

“ SixFive have streamlined the onboarding of new staff into Google Workspace ensuring all staff have the same experience and training. ”
